Riva Light Cure is a radiopaque, resin reinforced glass ionomer restorative material for use in a wide range of restorative applications. It is available in A1, A2, A3, A3.5, A4, B2, B3, B4, C2, C4 and bleach shades, in capsules and powder-liquid kits. Riva Light Cure is the ideal radiopaque, resin reinforced glass ionomer restorative material. With excellent tooth adhesion, sustained fluoride release, high compressive strength and command set, Riva Light Cure is useful for a broad range of applications, in cavities of varying depths and in situations where aesthetics are of importance. It is also useful as a base or liner for other restorative materials. Riva Light Cure may be used as a base or liner for other restorative materials. In situations such as direct, semi-permanent or temporaries, it may be used as a liner for other restorative materials, or as a base for other restorative materials. In situations such as direct, semi-permanent or temporaries, it may be used as a liner for other restorative materials, or as a base for other restorative materials. In situations such as direct, semi-permanent or temporaries, it may be used as a liner for other restorative materials, or as a base for other restorative materials.

INSTRUCTIONS FOR USING RIVA LIGHT CURE CAPSULES

1. Place Riva Light Cure into the cavity, being careful not to trap air under or within the restoration. Apply each capsule individually, as stated in the instructions for using RIVA LIGHT CURE capsul.
